does the world's oral majority--adults with limited formal education (ALFE)--really prefer to learn? Few pause long enough to ask those who eschew print. The result of scholarly research and prolonged immersion in the Cambodian culture, Connected Learning exposes the truth about orality--the shame associated with limited formal education; the unfortunate misnomer that is orality; the place of spirituality, grace, and hope; and the obvious but overlooked learning preferences. ALFE have different ways of learning and knowing, a different epistemology and culture from print learners, even though we all begin alike. The choice is not between Ong's orality or literacy, but between learning from people or from print. Dr. Thigpen, a veteran cross-cultural worker, shares remedies for the hegemony and inequities unwittingly fostered by the literate minority. In a dominant culture where learning from people is prime, how can educators with a preference for print adapt? Providing an important tool in the Learning Quadrants diagram, Connected Learning advises teaching to the quadrant and calls for seven necessary shifts in teaching. Anyone versed in orality will admit these findings have global implications and applications (Steffen). The reader who heeds will positively impact a huge portion of humanity.

**amita health continuing education:** Disability Studies in India Renu Addlakha, 2020-11-29 Since the 1970s, the international disability rights movement, the United Nations and national governments across the world have attempted to ameliorate the status of the disabled population through a range of legislative and policy measures primarily in the areas of health, education, employment, accessible environments and social security. While the discourse in the disability sector in India has shifted from charity and welfare to human rights and entitlements, disability studies — as an interdisciplinary academic terrain that focuses on the contributions, experiences, history and culture of persons with disabilities — has not yet taken root. This volume collates some of the most recent pioneering work on disability studies from across the country. The essays presented here engage with the concept of disability from a variety of disciplinary positions, sociocultural contexts and subjective experiences within the overarching framework of the Indian reality. The contributors — including some with disabilities themselves — provide a well-rounded perspective, in shifting focus from disability as a medical condition only needing clinical intervention to giving it due social and academic legitimacy. This book outlines key issues that would be germane to any disability studies endeavour in India and South Asia, and will appeal to academics, activists, institutions, laypersons and professionals involved in social welfare, sociology, disability studies, women's studies, psychiatry, rehabilitation, and social and preventive medicine.

**amita health continuing education: GOVERNANCE AND POVERTY REDUCTION** AMITA SINGH, KAPIL KAPOOR, RABINDRANATH BHATTACHARYA, 2008-12-04 Poverty reduction in South Asia is a precondition for sustaining any form of reforms in governance. The new public management reforms which started in South Asia from Sri Lanka taking the initiative in 1977-78 have been a decisive break from the previously practised State driven protectionist system. Investment in the region has been rising and even per capita income has shown some increase, yet the state has not been able to lead these reforms appropriately and efficiently. Thus poverty has not been reduced, ordinary people continue to languish under government programmes and the socially excluded remain outside the mainstream decision making bodies. Governance in South Asia faces the single most important challenge of poverty reduction which continues to blunt and disfigure capacity, self esteem and service delivery system to the poor. This book attempts to bring out microlevel studies from many regions in South Asia to address issues of entrepreneurship, knowledge and professionalism. As an initiator of the idea on developing a critique to the straightjacketed 'best practice' research, this book questions the standard practice in evaluating administrative reforms as not being the true base for knowledge. Administrators need to balance capacity and control in every implementation programme. Confining to the knowledge of 'best practices' may conceal enormous amount of information from the 'less than best' practices which may be necessary to sustain good initiatives of public managers. This book highlights areas of active networking, partnerships and collaborations amongst state and non-state bodies, NGOs and specialist Science and Technical Organizations. The true nature of governance is explained and demonstrated through the processes which otherwise pass off undetected in macro-understanding of governance.
