American Geriatrics Society Beers Criteria: A Vital Tool for Safe Medication Use in Older Adults

american geriatrics society beers criteria is a cornerstone resource in geriatric medicine, widely recognized for its role in guiding healthcare providers in the safe prescribing of medications for older adults. As we age, the way our bodies process drugs changes, making medication management more complex and prone to risks. The Beers Criteria, developed and regularly updated by the American Geriatrics Society (AGS), helps clinicians identify potentially inappropriate medications (PIMs) that may pose higher risks than benefits for elderly patients. This comprehensive list has become essential in improving medication safety and enhancing the quality of care in geriatrics.

Understanding the American Geriatrics Society Beers Criteria

The Beers Criteria is essentially a curated list of medications deemed potentially inappropriate for older adults, primarily because of their side effects, interactions, or limited effectiveness in this population. Originating in 1991 and named after Dr. Mark Beers, who first developed the list, the criteria have evolved to reflect contemporary research and clinical practice. The American Geriatrics Society took stewardship of the criteria, ensuring they remain a dynamic, evidence-based tool tailored to the nuances of aging physiology.

Why Is the Beers Criteria Important?

Older adults often manage multiple chronic conditions, leading to polypharmacy – the use of multiple medications simultaneously. Polypharmacy increases the risk of adverse drug events, drug-drug interactions, and medication non-adherence. The Beers Criteria provides a practical framework to:

- Identify medications that may cause harmful side effects in older adults.
- Warn against drugs with a high risk of falls, confusion, or hospitalizations.
- Promote alternative, safer medication options or non-pharmacological interventions.
- Guide clinicians in deprescribing unnecessary or harmful medications.

By integrating the Beers Criteria into clinical practice, healthcare

providers can reduce unnecessary hospital admissions and improve overall patient outcomes.

Key Components of the Beers Criteria

The American Geriatrics Society Beers Criteria is organized into several categories to help clinicians make informed decisions about medication use:

Medications to Avoid in Older Adults

This list includes drugs that generally have a high risk of adverse effects and limited benefit in the elderly. Examples include certain anticholinergics, benzodiazepines, and some antipsychotics, which can cause confusion, sedation, or increase fall risk.

Medications to Avoid with Specific Diseases or Syndromes

Some drugs are contraindicated in older adults with particular health conditions. For example, non-steroidal anti-inflammatory drugs (NSAIDs) are discouraged in patients with chronic kidney disease or heart failure due to the risk of worsening these conditions.

Medications to Use with Caution

Certain medications aren't outright inappropriate but require close monitoring due to potential risks. For instance, diuretics may cause electrolyte imbalances, so their use warrants vigilance.

Drug-Drug Interactions and Dosage Adjustments

The Beers Criteria also highlights problematic drug combinations and the need for dose modifications in the elderly. Since kidney and liver function decline with age, dosage adjustments prevent toxic accumulation.

How Healthcare Providers Use the Beers Criteria

The Beers Criteria is more than just a list—it's a clinical decision support tool. Physicians, pharmacists, and other healthcare professionals use it during medication reconciliation, prescribing, and review processes to optimize treatment plans.

Incorporating Beers Criteria into Clinical Practice

Many electronic health records (EHR) and prescribing systems now integrate the Beers Criteria, alerting providers when a potentially inappropriate medication is prescribed. This real-time feedback promotes safer prescribing habits.

Deprescribing: A Critical Aspect

Deprescribing refers to the planned reduction or stopping of medications that may no longer be beneficial or could cause harm. The Beers Criteria provides evidence-based guidance that supports clinicians in making these difficult decisions, balancing risks and benefits while considering patient preferences.

Impact on Patient Safety and Healthcare Quality

The implementation of the American Geriatrics Society Beers Criteria has had measurable impacts on reducing adverse drug events and improving medication safety among older adults.

Reducing Adverse Drug Reactions

Older adults are especially vulnerable to adverse drug reactions (ADRs), which can lead to emergency department visits or hospitalizations. By identifying high-risk medications, the Beers Criteria helps clinicians avoid or replace these drugs, significantly reducing ADR rates.

Improving Communication Between Providers and Patients

The Beers Criteria fosters better conversations about medication risks and benefits. Patients and caregivers are encouraged to discuss their medications proactively, leading to shared decision-making and increased medication adherence.

Challenges and Limitations of the Beers Criteria

While the Beers Criteria is a valuable tool, it's not without limitations. Clinical judgment remains paramount when applying its recommendations.

Individualized Care Is Essential

Not every medication listed as potentially inappropriate is harmful for all older adults. Some patients may require medications on the list due to lack of alternatives or specific clinical scenarios. Providers must weigh individual risks, benefits, and patient preferences.

Keeping Up with Updates

The Beers Criteria is updated approximately every three years to incorporate new research and evolving drug information. Staying current with these updates is critical for accurate application but can be challenging in busy clinical settings.

Variability in Medication Availability

Some medications listed may not be available or commonly used in all countries or settings, limiting the criteria's global applicability. Nevertheless, its principles remain relevant worldwide.

Future Directions in Geriatric Medication Safety

The American Geriatrics Society continues to refine the Beers Criteria, integrating emerging evidence and expanding its scope. Future iterations may include more personalized medicine approaches, incorporating genetic factors or biomarkers to tailor medication choices further.

Additionally, advances in digital health tools and artificial intelligence promise to enhance the integration of Beers Criteria into daily clinical workflows, making safer prescribing easier and more efficient.

The American Geriatrics Society Beers Criteria stands as a testament to the commitment toward improving the lives of older adults through safer medication use. By understanding its principles and thoughtfully applying its guidance, healthcare providers can navigate the complexities of geriatric pharmacotherapy with greater confidence, ultimately fostering healthier aging and better patient experiences.

Frequently Asked Questions

What is the American Geriatrics Society Beers Criteria?

The American Geriatrics Society Beers Criteria is a guideline that lists potentially inappropriate medications that should generally be avoided in older adults due to their higher risk of adverse effects.

Why is the Beers Criteria important for geriatric care?

The Beers Criteria helps healthcare providers identify medications that may cause more harm than benefit in older adults, promoting safer prescribing practices and reducing the risk of adverse drug events.

How often is the Beers Criteria updated?

The Beers Criteria is typically updated every 3 years by the American Geriatrics Society to incorporate new evidence and emerging safety concerns related to medications for older adults.

Can the Beers Criteria be used worldwide or is it specific to the United States?

While the Beers Criteria is developed by the American Geriatrics Society and primarily used in the United States, many healthcare providers worldwide reference it as a valuable resource for geriatric medication safety.

What types of medications are included in the Beers Criteria?

The Beers Criteria includes various classes of medications such as anticholinergics, benzodiazepines, nonsteroidal anti-inflammatory drugs (NSAIDs), and certain cardiovascular drugs that pose higher risks for older adults.

How does the Beers Criteria influence prescribing practices?

The Beers Criteria guides clinicians in avoiding or adjusting dosages of high-risk medications for older adults, thereby improving medication safety and reducing the incidence of side effects and hospitalizations.

Is the Beers Criteria applicable to all older adults regardless of health conditions?

The Beers Criteria provides general guidance, but clinicians must consider individual patient factors such as comorbidities, overall health status, and life expectancy when applying the criteria to prescribing decisions.

Where can healthcare professionals access the latest version of the Beers Criteria?

Healthcare professionals can access the latest Beers Criteria through the American Geriatrics Society's official website or peer-reviewed publications that publish the updated guidelines.

American Geriatrics Society Beers Criteria: A Critical Tool for Safer Medication Use in Older Adults

american geriatrics society beers criteria represents a cornerstone in geriatric medicine, aimed at enhancing the safety of medication prescribing for older adults. With the complexity of polypharmacy and the physiological changes related to aging, the Beers Criteria serves as an evidence-based guideline to minimize potentially inappropriate medications (PIMs) and improve clinical outcomes in elderly patients. Developed and maintained by the American Geriatrics Society (AGS), this list has evolved over decades to reflect contemporary pharmacological knowledge and patient safety priorities.

Understanding the nuances of the American Geriatrics Society Beers Criteria is essential for healthcare providers, pharmacists, and policymakers involved in geriatric care. This article explores the development, scope, and practical implications of the Beers Criteria, emphasizing its role in clinical decision-making and medication management for older adults.

Historical Development and Purpose of the Beers Criteria

Originally introduced in 1991 by Dr. Mark Beers, the Beers Criteria was designed as a guideline to identify medications that may pose risks greater than benefits when prescribed to older populations. The American Geriatrics Society assumed responsibility for updating and disseminating this guideline in 2011, ensuring that it remains current with advances in pharmacotherapy and geriatric research.

The primary purpose of the Beers Criteria is to reduce adverse drug events (ADEs) by highlighting medications that are potentially inappropriate due to their side effect profiles, drug-drug interactions, or diminished efficacy in elderly physiology. It addresses the unique challenges of aging, such as decreased renal clearance, altered hepatic metabolism, and increased sensitivity to certain drug classes.

Key Features of the AGS Beers Criteria

The American Geriatrics Society Beers Criteria is a dynamic document, updated approximately every three years. The latest update reflects a comprehensive review of literature, clinical evidence, and expert consensus.

Key features include:

- **Medication Lists:** Categorization of drugs into groups such as potentially inappropriate medications to avoid, medications to avoid with certain diseases or syndromes, and medications to be used with caution.
- **Clinical Context:** Recommendations are tailored not only by drug but also by clinical conditions common in older adults, like dementia, heart failure, or chronic kidney disease.

- **Focus on Patient Safety:** Emphasis on reducing risks such as cognitive impairment, falls, and hospitalizations linked to inappropriate medications.
- **Evidence-Based Approach:** Utilization of current scientific studies and expert opinion to validate the inclusion or exclusion of specific drugs.

Impact on Clinical Practice and Geriatric Pharmacotherapy

The incorporation of the American Geriatrics Society Beers Criteria into clinical practice has been instrumental in shaping prescribing habits and improving medication safety. Studies have demonstrated that adherence to the Beers Criteria can reduce the incidence of adverse drug reactions and hospital admissions among older adults.

Healthcare systems and electronic prescribing platforms increasingly integrate Beers Criteria alerts to assist clinicians in real-time decision-making. This integration serves as a clinical decision support tool to flag potentially inappropriate prescriptions before they reach the patient.

Comparisons with Other Geriatric Medication Guidelines

While the Beers Criteria is widely recognized, it is not the sole guideline addressing medication safety in elderly patients. Other frameworks include the STOPP/START criteria (Screening Tool of Older Persons' Prescriptions and Screening Tool to Alert to Right Treatment), which some studies argue provide a more comprehensive approach by also identifying potentially omitted medications.

Comparatively:

- **Beers Criteria:** Primarily focused on drugs to avoid or use cautiously; widely used in the United States.
- **STOPP/START Criteria:** Includes medications to avoid and those that should be initiated; more commonly applied in European contexts.
- **Clinical Utility:** Both tools complement each other, and some clinicians use them in tandem for a more holistic medication review.

Challenges and Limitations in Application

Despite its widespread acceptance, the American Geriatrics Society Beers Criteria faces certain limitations. One significant challenge is the individual variability among older adults; what is inappropriate for one

patient may be necessary for another based on clinical judgment.

Moreover, the Beers Criteria does not replace personalized clinical assessment. It serves as a guideline rather than a rigid rulebook. For example, some medications listed as potentially inappropriate may still be prescribed when the benefits outweigh the risks, especially in complex cases.

Additionally, the criteria primarily target medications common in the United States, which may limit applicability in other regions with different drug formularies and prescribing practices.

Pros and Cons of Using the Beers Criteria

- **Pros:**

- Improves awareness of medication risks in elderly patients.
- Facilitates deprescribing and medication reconciliation efforts.
- Supports clinical decision-making through evidence-based recommendations.
- Reduces adverse drug events and hospitalizations in geriatric populations.

- **Cons:**

- May lead to under-treatment if applied rigidly without clinical context.
- Potentially limited generalizability outside the U.S. healthcare setting.
- Requires continuous updates to keep pace with pharmacological advances.
- Does not address non-pharmacological interventions or holistic care strategies.

Future Directions and Integration in Geriatric Care

As the population ages globally, the importance of tools like the American Geriatrics Society Beers Criteria is expected to increase. Future updates will likely incorporate emerging data on novel medications, pharmacogenomics, and personalized medicine approaches.

Integration with artificial intelligence (AI) and machine learning platforms may enhance the precision of prescribing alerts, tailoring recommendations based on individual patient profiles and real-world outcomes.

Furthermore, education and training for healthcare professionals on the appropriate use of the Beers Criteria will remain critical. Encouraging a balanced approach—combining evidence-based guidelines with individualized patient care—will optimize therapeutic outcomes.

In summary, the American Geriatrics Society Beers Criteria continues to be an indispensable resource for clinicians managing medications in older adults. Its evolution reflects the ongoing commitment to patient safety and quality care in geriatrics, underscoring the complex interplay between aging physiology and pharmacotherapy.

american geriatrics society beers criteria: Handbook of Cannabis for Clinicians: Principles and Practice Dustin Sulak DO, 2021-06-29 The first foundational text on the clinical use of cannabis and cannabinoid therapies. Despite thousands of years of medical use and an impressive record of safety, versatility, and efficacy, Cannabis sativa has existed outside the modern pharmacopeia since the 1940s. Primarily driven by popular demand, this botanical has returned to health care, but most clinicians lack the knowledge essential for identifying candidates for treatment, guiding patients, maximizing benefit, and minimizing harm. Dustin Sulak provides health care professionals—including physicians, psychologists, pharmacists, and nurses—with an accessible and evidence-based reference that empowers them to intelligently discuss cannabis with their patients and implement cannabis and cannabinoid therapies with confidence. Based on over a decade of clinical experience and an extensive review of the literature, this detailed and scientifically accurate guide includes the history of cannabis in medicine, the foundations of endocannabinoid physiology, the pharmacological effects of cannabis' myriad active constituents, the clinical utility of its various preparations, and specific strategies and cautions for treating the most common conditions presenting to a cannabis clinician. This guide is an essential resource for practitioners of any specialty field or experience level who wish to improve their patients' outcomes, harness the healing potential of the endocannabinoid system, and wield a powerful solution to many of healthcare's challenges.

Raja, Scott M. Fishman, Spencer S. Liu, and Steven P. Cohen, presents a complete, full-color overview of today's theory and practice of pain medicine and regional anesthesia. It provides practical guidance on the full range of today's pharmacologic, interventional, neuromodulative, physiotherapeutic, and psychological management options for the evaluation, treatment, and rehabilitation of persons in pain. - Covers all you need to know to stay up to date in practice and excel at examinations - everything from basic considerations through local anesthetics, nerve block techniques, acupuncture, cancer pain, and much more. - Uses a practical, quick-reference format with short, easy-to-read chapters. - Presents the management of pain for every setting where it is practiced, including the emergency room, the critical care unit, and the pain clinic. - Features hundreds of diagrams, illustrations, summary charts and tables that clarify key information and injection techniques - now in full color for the first time. - Includes the latest best management techniques, including joint injections, ultrasound-guided therapies, and new pharmacologic agents (such as topical analgesics). - Discusses recent global developments regarding opioid induced hyperalgesia, addiction and substance abuse, neuromodulation and pain management, and identification of specific targets for molecular pain. - Expert Consult™ eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, Q&As, and references from the book on a variety of devices.

american geriatrics society beers criteria: *Addiction in the Older Patient* Dr Maria Sullivan, Dr Frances Levin, 2016-08-02 This text focuses on the under-recognized and undertreated problem of addiction in later life. The widespread lack of clinical knowledge about this patient population can be traced to several sources: the systematic exclusion of older individuals from clinical trials; their reluctance to seek medical help owing to stigma and shame; the fact that addictive disorders may be disguised by concurrent medical conditions; a lack of screening instruments tailored to an older population; and the low sensitivity of standard diagnostic criteria for detecting addiction in middle-aged and elderly adults who do not display the occupational and legal red flags seen in younger individuals. This volume provides the reader with a clear sense of the surprisingly high prevalence of alcohol and substance use disorders in older adults. For each of the

major classes of addictive substances, both prescribed and illicit, this book highlights the key clinical issues that can complicate successful diagnosis. The authors describe strategies for initial engagement with the patient, including screening instruments, brief interventions which can be adapted to a primary care setting, emerging web-based and mobile technologies, and treatment strategies which are tailored to the age-appropriate needs of older adults, including older women - who have been found to be especially vulnerable to prescription drug misuse. With the aging of the baby boomers, a generation arriving in middle-age with greater exposure to alcohol and drugs than any previous cohort, the need for successful identification and effective treatment of alcohol and substance use disorders in later life has become a clinical imperative. *Addiction in the Older Patient*, whose editors bring more than 40 years of combined research and clinical experience in the field of addiction treatment, offers a comprehensive introduction to this underexplored and timely topic. This text synthesizes current clinical evidence to support the most effective strategies for discovering and treating addictive disorders in our older patients.

american geriatrics society beers criteria: *Neuropathology of Drug Addictions and Substance Misuse Volume 3* Victor R Preedy, 2016-04-25 Neuropathology of Drug Addictions and Substance Misuse, Volume 3: General Processes and Mechanisms, Prescription Medications, Caffeine and Areca, Polydrug Misuse, Emerging Addictions and Non-Drug Addictions is the third of three volumes in this informative series and offers a comprehensive examination of the adverse consequences of the most common drugs of abuse. Each volume serves to update the reader's knowledge on the broader field of addiction as well as to deepen understanding of specific addictive substances. Volume 3 addresses prescription medications, caffeine, polydrug misuse, and non-drug addictions. Each section provides data on the general, molecular, cellular, structural, and functional neurological aspects of a given substance, with a focus on the adverse consequences of addictions. Research shows that the neuropathological features of one addiction are often applicable to those of others, and understanding these commonalities provides a platform for studying specific addictions in more depth and may ultimately lead researchers toward new modes of understanding, causation, prevention and treatment. However, marshalling data on the complex relationships between addictions is difficult due to the myriad of material and substances. - Offers a modern approach to understanding the pathology of substances of abuse, offering an evidence-based ethos for understanding the neurology of addictions - Fills an existing gap in the literature by serving as a one-stop-shopping synopsis of everything to do with the neuropathology of drugs of addiction and substance misuse - Includes in each chapter: list of abbreviations, abstract, introduction, applications to other addictions and substance misuse, mini-dictionary of terms, summary points, 6+ figures and tables, full references - Offers coverage of preclinical, clinical, and population studies, from the cell to whole organs, and from the genome to whole body

american geriatrics society beers criteria: **Health Promotion in Long-Term Care**

Facilities Kallol Kumar Bhattacharyya, 2025-06-11 This book discusses biopsychosocial barriers and facilitators of long-term care services, focusing on health promotional activities targeted to maximize quality of life. This knowledge of meaningful activities helps to identify and improve strategies for supporting people living in long-term care facilities with various chronic disorders at a deeper level. Although no all-encompassing theory of caregiving has yet been developed, this book explores various theoretical formulations as central aspects of promoting health in long-term care practices. The current culture change in long-term care controls the well-being of the concerned person physically, psychologically, socially, and economically. In later life, these issues profoundly impact individuals' morbidity and lifespan. Further, it has been evidenced that the Centers for Medicare & Medicaid Services' five-star rating system that provides long-term care facilities' quality information to the public does not fully represent what matters to the residents from their perspectives. Resident satisfaction is an integral part of the quality of care; instead of clinical quality measures only, it is influenced by residents, their family members, staff, and administration. Person-centered care not only requires a 'culture change' in how residents and caregivers work together, but it also requires facilities to ensure staff deliver care with the highest possible level of empathy and adopt meaningful care practices. Among the topics covered in this contributed volume: Are Quality of Care and Quality of Life Synonymous in Long-Term Care? Aging-in-Place or Long-Term Care? Changing the Narrative to Promote Aging in Place in Long-Term Care Person-Centered Care and Culture Change Movement in Long-Term Care Extending the Age-Friendly Movement to Long-Term Care Potential of Health Promotional Practices in Long-Term Care Health Promotion in Long-Term Care Facilities is an essential resource for a diverse readership including academics and researchers in gerontology, aging studies, health management and policy, health sciences, nursing, psychology, social work, and public health, as well as caregivers and policymakers. The book's academic value from a multidisciplinary perspective would be beneficial for students in the above-mentioned fields.

Segal-Gidan, 2023-03-23 Written by NPs and PAs who have a wealth of experience in the care of older adults across all practice settings, *Gerontology and Geriatrics for NPs and PAs* takes an evidence-based approach to both gerontology and geriatrics, incorporating the latest national and international guidelines and standards of care. This first-of-its-kind text takes an interprofessional, teamwork-based approach that reflects Interprofessional Education Collaborative (IPEC) core competencies, as well as the unique perspectives that NPs and PAs each bring to the collaborative care of older adults. - Covers both primary care and acute care of older adults and fully addresses both graduate-level and practitioner core competencies necessary for optimal care of older adults. - Places a strong emphasis on wellness (including nutrition and the Healthy People 2020 targets), normal aging, common syndromes of aging, disease management, patient safety (particularly in acute care settings), and a patient-centered care approach. - Features vibrant, full-color illustrations, a full-color design for ease of navigation, and graduate-level learning features that include Key Points at the end of each chapter for quick reference and exam preparation. - Addresses a wide range of topics specifically focused on the common medical problems of older adults, with chapters logically organized for efficient study and quick clinical reference. american geriatrics society beers criteria: *Psychiatric Consultation in Long-Term Care* Abhilash Desai, George Grossberg, 2017-08-11 Building on the first edition, *Psychiatric Consultation in Long-Term Care* has been fully revised and updated, integrating DSM-5 classification throughout. It delivers an essential resource for psychiatrists, neurologists, geriatricians, palliative care physicians, primary care physicians, nurse practitioners, pharmacists, and physician assistants involved in prevention, assessment, diagnosis, and management of neuropsychiatric disorders in long-term care (LTC) populations, as well as for nurses, social workers, and other professionals involved in important day-to-day care. The book provides comprehensive descriptions of practical,

strengths-based, individualized, psychosocial, spiritual, and environmental approaches, and high-quality mental healthcare utilizing pharmacological interventions when appropriate to improve the emotional and spiritual well-being of LTC residents. It details key elements in creating genuine person-centered long-term care: the reduction of inappropriate medications and counter-therapeutic staff approaches, treating serious psychiatric disorders with evidence-based interventions, and a road-map for owners and administrators of LTC facilities.

american geriatrics society beers criteria: *Acute Care Surgery in Geriatric Patients* Patrizio Petrone, Collin E.M. Brathwaite, 2023-09-04 This comprehensive text will provide a state-of-the art review of the field of geriatric acute care surgery, reviewing new epidemiology data about risk factors for this type of trauma. Assessment of the geriatric trauma patient is unique, and this population requires special attention. Moreover, geriatric patients often suffer from mild to severe cognitive impairment, cardiovascular, and pulmonary insufficiency, which can complicate trauma. This comorbidity informs the evaluation, diagnosis and management of geriatric trauma and stresses the importance of team-based interprofessional care for affected patients. Opening chapters describe general principles of geriatric acute care, the physiology of aging, frailty, injury prevention, and goals of care. The main section of the book presents the latest treatment strategies for traumatic orthopedic, cardiovascular and gastrointestinal trauma, including sepsis, complications and critical care monitoring, before turning to nursing considerations for this ever-growing population. Additional chapters on outcomes and COVID management complete the presentation. Providing a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts, this text will serve as a very useful resource for physicians, medical students, residents, nurses, therapists, and researchers dealing with, and interested in this challenging type of trauma.

MRT-Scans) enthält das Buch außerdem: * Eine umfassende Einführung in die relevanten biologischen, sozialen und gemeinwohlbezogenen Perspektiven bei der Pflege älterer und alternder Patienten sowie in die Verschreibung von Medikamenten für ältere Patienten * Eine umfassende Untersuchung von Essstörungen, die häufig bei älteren Menschen auftreten, sowie Methoden zur Förderung einer gesunden Ernährung bei älteren Patienten * Eine praktische Erörterung hämatologischer und kardiovaskulärer Störungen und Krankheiten bei älteren Patienten * Eine eingehende Betrachtung besonderer Themen in der Altenpflege, darunter Missbrauch älterer Menschen, Alkoholabhängigkeit und Drogenmissbrauch, Schwierigkeiten beim Transport und Sterbebegleitung Pathy's Principles and Practice of Geriatric Medicine eignet sich perfekt für alle Personen in Pflegeberufen, die mit älteren Patienten arbeiten, und darf auch in den Bibliotheken von Mitarbeitern der Gesundheitsdienste bei der Betreuung von älteren Patienten und Pflegebedürftigen nicht fehlen

american geriatrics society beers criteria: **Pharmacological Considerations in Gerontology** Abimbola Farinde, Megan Hebdon, Megan C. Thomas Hebdon, 2019-12-04

Underscores the complexity of prescribing drugs for older adults while providing state-of-the-art guidelines for safe patient care. An evidence-based, quick-access reference for adult gerontology nurse practitioners and related healthcare providers, this text describes a holistic, patient-centered approach to prescribing drugs to older adults. Comprehensive yet concise writing distills timely guidance on the complexities of safely prescribing to this unique population. This book opens with physiologic changes and assessment considerations for older adults, followed by a discussion of pharmacokinetics and pharmacodynamics, then a final section on guidelines for drug selection, drug interactions, and multimorbidities. Each chapter presents information in a consistent, easy-to-read template. Patient Care Pearls alert readers to crucial information and relevant case studies with examples of inappropriate medical prescribing provide context for drug delivery. Key points and chapter summaries help reinforce information. Additional features include the provision of guidelines for psychotropic medications in LTC facilities, special considerations for frail older adults, and the role of pharmacists as a resource for other practitioners. Key Features: Decision-making guidance on prescribing practices in varied settings. Discusses in depth physiological considerations including multimorbidity and polypharmacy. Presents Beer's Criteria and its implications. Guidelines for psychotropic medications in LTC facilities. Special considerations for frail older adults. Patient Care Pearls, case studies, key points, and chapter summaries.

american geriatrics society beers criteria: Optimizing Pharmacotherapy in Older Patients
Antonio Cherubini, Arduino A. Mangoni, Denis O'Mahony, Mirko Petrovic, 2023-06-21 This book summarizes the broad and rapidly evolving field of geriatric pharmacotherapy, which is becoming increasingly relevant for practicing physicians who care and prescribe medications for older patients. Around the globe, ageing populations are associated with an increased prevalence of chronic diseases. Older adults are often affected by multimorbidity, i.e., suffer from more than one chronic disease. The main consequence of multimorbidity is polypharmacy, which is commonly defined as the regular use of five or more medicines. Polypharmacy has now reached epidemic proportions in our societies, and is associated with an increased risk of drug-drug interactions, drug-disease interactions and adverse drug reactions. The management of polypharmacy in older patients with complex multimorbidity poses several challenges and needs to be based on specific knowledge and prescribing expertise. The aim of this book is to provide a comprehensive update on the field, and to share the expertise needed to optimize the management of pharmacotherapy in older patients.
