tina jones health history shadow health: Epidemic Encounters Magda Fahrni, Esyllt W. Jones, 2012-05-24 Health crises such as the SARS epidemic and H1N1 have rekindled interest in the 1918 influenza pandemic, which swept the globe after the First World War and killed approximately

fifty million people. Epidemic Encounters examines the pandemic in Canada, where one-third of the population took ill and fifty-five thousand people died. What role did social inequalities play in determining who survived? How did the authorities, health care workers, and ordinary citizens respond? Contributors answer these questions as they pertained to both local and national contexts. In the process, they offer new insights into medical history's usefulness in the struggle against epidemic disease.

tina jones health history shadow health: *The Last Plague* Mark Osborne Humphries, 2013-01-01 The 'Spanish' influenza of 1918 was the deadliest pandemic in history, killing as many as 50 million people worldwide. Canadian federal public health officials tried to prevent the disease from entering the country by implementing a maritime quarantine, as had been their standard practice since the cholera epidemics of 1832. But the 1918 flu was a different type of disease. In spite of the best efforts of both federal and local officials, up to fifty thousand Canadians died. In *The Last Plague*, Mark Osborne Humphries examines how federal epidemic disease management strategies developed before the First World War, arguing that the deadliest epidemic in Canadian history ultimately challenged traditional ideas about disease and public health governance. Using federal, provincial, and municipal archival sources, newspapers, and newly discovered military records — as well as original epidemiological studies — Humphries' sweeping national study situates the flu within a larger social, political, and military context for the first time. His provocative conclusion is that the 1918 flu crisis had important long-term consequences at the national level, ushering in the 'modern' era of public health in Canada.

tina jones health history shadow health: *Made Modern* Edward Jones-Imhotep, Tina Adcock, 2018-12-14 Science and technology have shaped not only economic empires and industrial landscapes, but also the identities, anxieties, and understandings of people living in modern times. *Made Modern: Science and Technology in Canadian History* draws together leading scholars from a wide range of fields to enrich our understanding of history inside and outside Canada's borders. The book's chapters examine how science and technology have allowed Canadians to imagine and reinvent themselves as modern. Focusing on topics including exploration, scientific rationality, the occult, medical instruments, patents, communication, and infrastructure, the contributors situate Canadian scientific and technological developments within larger national and transnational contexts. The first major collection of its kind in thirty years, *Made Modern* explores the place of science and technology in shaping Canadians' experience of themselves and their place in the modern world.

tina jones health history shadow health: *The Sounds of Furious Living* Matthew Kelly, 2023-10-13 Four decades have passed since reports of a mysterious "gay cancer" first appeared in US newspapers. In the ensuing years, the pandemic that would come to be called AIDS changed the world in innumerable ways. It also gave rise to one of the late twentieth century's largest health-based empowerment movements. Scholars across diverse traditions have documented the rise of the AIDS activist movement, chronicling the impassioned echoes of protestors who took to the streets to demand "drugs into bodies." And yet not all activism creates echoes. Included among the ranks of 1980s and 1990s-era AIDS activists were individuals whose expressions of empowerment differed markedly from those demanding open access to mainstream pharmaceutical agents. Largely forgotten today, this activist tradition was comprised of individuals who embraced unorthodox approaches for conceptualizing and treating their condition. Rejecting biomedical expertise, they shared alternative clinical paradigms, created underground networks for distributing unorthodox nostrums, and endorsed etiological models that challenged the association between HIV and AIDS. The theatre of their protests was not the streets of New York City's Greenwich Village but rather their bodies. And their language was not the riotous chants of public demonstration but the often-invisible embrace of contrarian systems for defining and treating their disease. *The Sounds of Furious Living* seeks to understand the AIDS activist tradition, identifying the historical currents out of which it arose. Embracing a patient-centered, social historical lens, it traces historic shifts in popular understanding of health and perceptions of biomedicine through the nineteenth and

twentieth centuries to explain the lasting appeal of unorthodox health activism into the modern era. In asking how unorthodox health activism flourished during the twentieth century's last major pandemic, Kelly also seeks to inform our understanding of resistance to biomedical authority in the setting of the twenty-first century's first major pandemic: COVID-19. As a deeply researched portrait of distrust and disenchantment, *The Sounds of Furious Living* helps explain the persistence of movements that challenge biomedicine's authority well into a century marked by biomedical innovation, while simultaneously posing important questions regarding the meaning and metrics of patient empowerment in clinical practice.

tina jones health history shadow health: Race in the Shadow of Law Eddie Bruce-Jones, 2016-12-01 *Race in the Shadow of Law* offers a critical legal analysis of European responses to institutional racism. It draws connections between contemporary legal knowledge practices and colonial systems of thought, arguing that many people of colour experience the law as a part of a racial problem, rather than a solution, to racial injustice. Based on a critical legal ethnography of anti-racism work in Europe, and with an emphasis on the German context, the book positions Black and anti-racist perspectives at the centre, rather than the margins, of critically thinking through the intersection of race and law. Combining this ethnography with comparative legal analysis, discourse analysis and critical race theory, the book develops a critical discussion of the European legal frameworks aimed at regulating racism, and particularly institutional racism, in policy and policing. In linking this critique to the transformative potential of social movements, however, it goes on to examine the strategic and creative possibility of disrupting conventional modes of engaging, and resisting, law.

tina jones health history shadow health: Afrika and Alemania Priscilla Layne, Michelle Stott James, Lisabeth Hock, 2025-07-15 *Afrika and Alemania* explores the representation of Blackness in German-speaking literary, autobiographical, and cinematic texts across two centuries. By examining how different groups of women with access to German culture have depicted Africa, Africans, and the African diaspora, the book challenges the assumption that all women will tell the same story. Focusing on Black women, non-Black women of colour, and white women, it investigates how these diverse voices engage with and represent Blackness within a society shaped by racial hierarchies. Part I analyses how Black, German-speaking women actively reshape and redefine Blackness in response to stereotypes upheld by white German society. Part II explores how non-Black women of colour navigate the complexities of othering while sometimes reproducing anti-Black stereotypes, while Part III discusses how white women's projections of fantasies about Africa often erase Black voices and render them invisible. Offering a nuanced analysis of the intersections of race, gender, ethnicity, and nationality, *Afrika and Alemania* provides a vital framework for understanding Blackness within contemporary scholarship and its broader social and cultural implications.
