university of chicago economics phd: Equity and Efficiency in Economic Development Donald J. Savoie, Irving Brecher, 1992-10-16 The ideological foundations of the contributors range from personalized neo-Marxism, through extreme centre neo-Keynesianism, to hard-line neoclassical mathematical economics. Despite this diversity there is a surprising degree of consensus. No contributor advocates centralized planning and none expects a free market to cure all economic ills. Opinions vary as to how well the market actually works, but all agree that equity and efficiency are essential goals which most consider to be complementary rather than mutually exclusive. In the concluding chapter it is suggested that current economic problems are caused not so much by government intervention as by the nature of that intervention. The authors believe that the recent ideological convergence may lead to a new paradigm, a theory of the optimal blend of market and management that will be flexible enough to deal with the varying conditions of diverse societies, thus simplifying the task of creating a smooth-running global economy. The contributors are Irma Adelman, Mark Blaug, Kenneth Boulding, Irving Brecher, Albert Breton, John S. Chipman, André Gunder Frank, Martha Fuentes Frank, Niles Hansen, Murray C. Kemp, Robin Marris, Richard Musgrave, Walt Rostow, Donald J. Savoie, Nicholas Spulber, and Paul Streeten. Higgins himself contributes a chapter on basic concepts and collaborates with Donald Savoie on the final chapter.

university of chicago economics phd: Late Neoclassical Economics Yahya M. Madra, 2016-06-10 Several contemporary economic theories revolve around different concepts: market failures, institutions, transaction costs, information asymmetries, motivational diversity, cognitive limitations, strategic behaviors and evolutionary stability. In recent years, many economists have argued that the increase in circulation and mobilization of these new and heterogeneous concepts and their associated methodologies (e.g., experiments, evolutionary modelling, simulations) signify the death of neoclassical economics. ? Late Neoclassical Economics: The Restoration of Theoretical Humanism in Contemporary Economic Theory draws on the work of Louis Althusser, Michel Foucault and the Amherst School, to construct the concept of a self-transparent and self-conscious human subject (Homo economicus) as the theoretical humanist core of the neoclassical tradition. Instead of identifying the emergent heterogeneity as a break from neoclassicism, this book offers a careful genealogy of many of the new concepts and approaches - including evolutionary game

theory, experimental economics and behavioural economics - and reads their elaboration as part of the restoration of the theoretical humanist core of the tradition. 'Late neoclassical economics' is therefore characterized as a collection of diverse approaches which have emerged in response to the drift towards structuralism. ? This book is suitable for those who study political economy, history of economic thought and philosophy of economics. The arguments put forward in this text will also resonate with anyone who is interested in the fate of the neoclassical tradition and the future of economic theory.

university of chicago economics phd: *Do Economists Make Markets?* Donald MacKenzie, Fabian Muniesa, Siu Leung-Sea, 2020-06-30 Around the globe, economists affect markets by saying what markets are doing, what they should do, and what they will do. Increasingly, experimental economists are even designing real-world markets. But, despite these facts, economists are still largely thought of as scientists who merely observe markets from the outside, like astronomers look at the stars. *Do Economists Make Markets?* boldly challenges this view. It is the first book dedicated to the controversial question of whether economics is performative--of whether, in some cases, economics actually produces the phenomena it analyzes. The book's case studies--including financial derivatives markets, telecommunications-frequency auctions, and individual transferable quotas in fisheries--give substance to the notion of the performativity of economics in an accessible, nontechnical way. Some chapters defend the notion; others attack it vigorously. The book ends with an extended chapter in which Michel Callon, the idea's main formulator, reflects upon the debate and asks what it means to say economics is performative. The book's insights and strong claims about the ways economics is entangled with the markets it studies should interest--and provoke--economic sociologists, economists, and other social scientists. In addition to the editors and Callon, the contributors include Marie-France Garcia-Parpet, Francesco Guala, Emmanuel Didier, Philip Mirowski, Edward Nik-Khah, Petter Holm, Vincent-Antonin Lépinay, and Timothy Mitchell.

There are virtually no systematic retrospective reflections on the field outside of the greater China region; and yet over the past decades the field has grown by leaps and bounds, and it is critical now that we pause to reflect on what has happened and what we can learn from the past. The contributors are among some of the most influential pioneers in the field whose entire academic lives have been dedicated to its development. *The Field of Chinese Language Education in the U.S.: A Retrospective of the 20th Century* is aimed at those who are currently engaged in Chinese language education, as teachers or as students.

university of chicago economics phd: Irony, Cynicism and the Chinese State Hans Steinmüller, Susanne Brandtstädter, 2015-11-19 Unprecedented social change in China has intensified the contradictions faced by ordinary people. In everyday life, people find themselves caught between official and popular discourses, encounter radically different representations of China's past and its future, and draw on widely diverse moral frameworks. This volume explores irony and cynicism as part of the social life of local communities in China, and specifically in relation to the contemporary Chinese state. It collects ethnographies of irony and cynicism in social action, written by a group of anthropologists who specialise in China. They use the lenses of irony and cynicism - broadly defined to include resignation, resistance, humour, ambiguity and dialogue - to look anew at the social, political and moral contradictions faced by Chinese people. The various contributions are concerned with both the interpretation of intentions in everyday social action and discourse, and the broader theoretical consequences of such interpretations for an understanding of the Chinese state. As a study of irony and cynicism in modern China and their implications on the social and political aspects of everyday life, this book will be of huge interest to students and scholars of social and cultural anthropology, Chinese culture and society, and Chinese politics.

university of chicago economics phd: Economists in the Americas Veronica Montecinos, John Markoff, 2010-01-01 Probably no region's economists have had greater public visibility or greater impact on regional and national public policy than Latin America's and no region has been more directly affected by the spread of US economics. *Economists in the Americas* joins a small but important comparative literature on economics as a profession and is the first comparative treatment of professional economists in the United States and Latin America. A multidisciplinary group of scholars discusses the last sixty years of shifting trends in economics in seven countries in the Western Hemisphere: Argentina, Brazil, Chile, Colombia, Mexico, Uruguay and the United States. The chapters address the history of economics in the Americas, the role of economists in politics and policy-making, economics education and competing paradigms in the field. This collection points to the interconnections among the national cases, the forging and breakdown of consensus around state and market dominance, the transnational diffusion of economic ideas and professional norms, as well as the embrace and rejection of an increasingly Americanized professional identity among Latin American economists. The book will be of interest to policymakers and scholars interested in the comparative history and sociology of economics, development, public policy, international affairs, political science and Latin American studies.

university of chicago economics phd: The Economics of Renewable Energy in the Gulf

Hisham M. Akhonbay, 2018-09-27 The Cooperation Council for the Arab States of the Gulf (GCC) has been at the epicenter of global energy markets because of its substantial endowment of hydrocarbons. Yet countries in the region have also stated their intent to be global leaders in renewable energy. This collection explores the drivers for the widespread adoption of renewable energy around the GCC, the need for renewable energy and the policy-economic factors that can create success. All six countries within the GCC have plans to include renewable energy power generation in their energy mix for various reasons including: a growing demand for electricity because of increasing populations, an increasing government fiscal deficit due to inefficient subsidies, the need to diversify the economy and global pressure to meet climate change requirements. However, the decision of when and by how much to introduce renewable energy is fraught with complications. In this book, a stellar cast of regional policy and academic experts explore the reasons behind these renewable energy plans and the potential impediments to success, whether it be the declining cost of producing energy from hydrocarbons, an infrastructure which needs to be updated, social acceptance, lack of financing and even harsh weather. Weighing up all these factors, the book considers the route forward for renewable energy in the Gulf region. The Economics of Renewable Energy in the Gulf offers an excellent examination of the adoption of renewable energy in the area. It will be of great interest to academic researchers and policy makers alike, particularly those working in the areas of energy economics, public policy and international relations.

university of chicago economics phd: Economics Made Fun N. Aydinonat, Jack Vromen,

2017-10-02 Best-selling books such as Freakonomics and The Undercover Economist have paved the way for the flourishing economics-made-fun genre. While books like these present economics as a strong and explanatory science, the ongoing economic crisis has exposed the shortcomings of economics to the general public. In the face of this crisis, many people, including well-known economists such as Paul Krugman, have started to express their doubts about whether economics is a success as a science. As well as academic papers, newspaper columns with a large audience have discussed the failure of economic to predict and explain ongoing trends. The emerging picture is somewhat confusing: economics-made-fun books present economics as a method of thinking that can successfully explain everyday and freaky phenomena. On the other hand, however, economics seems to fail in addressing and explaining the most pressing matters related to the field of economics itself. This book explores the confusion created by this contradictory picture of economics. Could a science that cannot answer its own core questions really be used to explain the logic of everyday life? This book was originally published as a special issue of the Journal of Economic Methodology.

university of chicago economics phd: Models of Futures Markets Barry Goss, 2013-05-13

This volume presents an entirely new analysis of the economics of futures markets, that will be of interest to both specialists in the area and the generalist economist seeking a new perspective. Through a combination of theoretical investigation and empirical application, three important themes are explored: the gains from futures trading and the efforts of emerging markets to reap these benefits; rationality and rival hypotheses of trader behaviour, such as noise trading; and the effect of regulatory tools on price formation.

university of chicago economics phd: Dispute Resolution in China, Europe and World Lei Chen, André Janssen, 2020-04-11 This book brings together articles from leading experts in the field of international dispute resolution. The main focus is on the situation in Asia, though the European perspective also plays an important part. Accordingly, the focus on the Asian dispute resolution market with a distinctly American and European “touch” is one of the book’s most unique features. The dispute resolution market is rapidly transforming, and dispute resolution law is changing with it –especially in Asia. This book highlights recent advances and outlines future trends in this area. Emphasis is especially placed on International Commercial Arbitration Law on the one hand; and on International Investment Arbitration Law on the other. Two dedicated sections address these two topics, while another is dedicated to a quite new phenomenon in the field of international dispute resolution, the emergence of International Commercial Courts not only in Asia, but also in other regions of the world (e.g. in the Netherlands). This raises a host of interesting legal questions, which the book addresses. The book’s final section investigates general trends in dispute resolution (e.g. the rising cost problem in arbitration in general).
