Timothy Culbert, Karen Olness, 2010-04-10 There is ample evidence that children and adolescents in large numbers are actively using integrative (complementary and alternative) therapies. Various studies now indicate that over 50% of pediatricians surveyed would refer a patient for integrative therapy, and they would welcome more natural therapies for children provided they were safe and effective. However, there has been little training for pediatricians in this area. The text also covers areas of controversy and identifies areas of uncertainty where future research is needed. Chapters also cite the best available evidence for both safety and efficacy of all therapies discussed. The series editor is Andrew Weil, MD, Professor and Director of the Program of Integrative Medicine at the University of Arizona. Dr. Weil's program was the first academic program in the US and he is the major name in integrative medicine in the US, and well-known around the world.
