**ross westerfield and jaffe corporate finance: Loose-Leaf Corporate Finance: Core Principles and Applications** Stephen A. Ross, Randolph W. Westerfield, Jeffrey Jaffe, Bradford D. Jordan, 2023-01-11 Corporate Finance: Core Principles and Applications was developed for the graduate (MBA) level as a concise, up-to-date, and to-the-point product, the majority of which can be realistically covered in a single term or course. To achieve the objective of reaching out to the many different types of students and the varying course settings, corporate finance is distilled down to its core, while maintaining a decidedly modern approach. Purely theoretical issues are downplayed, and the use of extensive and elaborate calculations is minimized to illustrate points that are either intuitively obvious or of limited practical use. The goal was to focus on what students really need to carry away from a principles course. A balance is struck by introducing and covering the essentials, while leaving more specialized topics to follow-up courses. Net present value is treated as the underlying and unifying concept in corporate finance. Every subject covered is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects. Also, the role of the financial manager as decision maker is emphasized, and the need for managerial input and judgment is stressed.

**ross westerfield and jaffe corporate finance: Corporate Finance and the Theory of the Firm** Stefan Detscher, 2007-11 Research Paper (undergraduate) from the year 2003 in the subject Business economics - Investment and Finance, grade: 2,0 (B), European Business School - International University Schlo Reichartshausen Oestrich-Winkel (Corporate Finance and Capital Markets), language: English, abstract: This book examines the links between corporate finance and the theory of the firm. As a basis for this analysis, theoretical foundations in corporate finance and the theory of the firm are provided. Furthermore, current research on the theory of the firm and corporate finance for the recently emerged type of firm of the human-capital intensive firm is presented. The most significant part of the analysis is the evaluation of the interrelation between corporate finance and the theory of the firm using a 3x3 matrix. This matrix compares three important theoretical frameworks of the firm (the firm as a nexus of contracts, as a collection of growth options and as a collection of assets) with three major fields of corporate finance (capital structure, corporate governance and valuation). This assessment is done for the traditional asset-intensive industrial firm, one of two basic types of firms in today's economy. For giving an additional insight into current research, the recently emerged human-capital intensive firm is shortly described in comparison to the traditional asset-intensive firm, and implications for corporate finance for this new type of firm are explained. As a conclusion, three major results can be stated: firstly, the theory of the firm definitely influences corporate finance for all described views of the firm, and it is thus an important basis for corporate finance. This fact makes it necessary to consider the underlying issue of the theory of the firm for each problem in corporate finance. Secondly, different views of the theory of the firm have different implications for corporate finance. For example, the appropriate valuation method depends on the considered view of t
