world history the modern world textbook: California World History : The Modern World Elisabeth Gaynor Ellis, Anthony Esler, 2019

world history the modern world textbook: The Origins of the Modern World Robert B. Marks, 2024-01-02 This clearly written and engrossing book presents a global narrative of the origins of the modern world from 1400 to the present. Unlike most studies, which assume that the "rise of the West" is the story of the coming of the modern world, this history, drawing upon new scholarship on Asia, Africa, and the New World and upon the maturing field of environmental history, constructs a story in which those parts of the world play major roles, including their impacts on the environment. Robert B. Marks defines the modern world as one marked by industry, the nation state, interstate warfare, a large and growing gap between the wealthiest and poorest parts of the world, increasing inequality within the wealthiest industrialized countries, and an escape from the environmental constraints of the "biological old regime." He explains its origins by emphasizing contingencies (such as the conquest of the New World); the broad comparability of the most advanced regions in China, India, and Europe; the reasons why England was able to escape from common ecological constraints facing all of those regions by the end of the eighteenth century; a conjuncture of human and natural forces that solidified a gap between the industrialized and non-industrialized parts of the world; the mounting environmental crisis that defines the modern world; and the ways in which the forces of globalization stress the economic and political underpinnings of the modern world. Now in a new edition that brings the saga of the modern world to the present in an environmental context, the book considers how and why the United States emerged as a world power in the twentieth century and became the sole superpower by the twenty-first century, and why the changed relationship of humans to the environment likely will be the hallmark of the modern era—the Anthropocene. Once again arguing that the US rise to global hegemon was contingent, not inevitable, Marks also points to the resurgence of Asia and the vastly changed relationship of humans to the environment that may in the long run overshadow any political and economic milestones of the past hundred years.

world history the modern world textbook: The New Politics of the Textbook Heather Hickman, Brad J. Porfilio, 2012-10-13 In an age of unprecedented corporate and political control over life inside of educational institutions, this book provides a needed intervention to investigate how the economic and political elite use traditional artifacts in K-16 schools to perpetuate their interests at the expense of minoritized social groups. The contributors provide a comprehensive examination of how textbooks, the most dominant cultural force in which corporations and political leaders impact the schooling curricula, shape students' thoughts and behavior, perpetuate power in dominant groups, and trivialize social groups who are oppressed on the structural axes of race, class, gender, sexuality, and (dis)ability. Several contributors also generate critical insight in how power shapes the production of textbooks and evaluate whether textbooks still perpetuate dominant Western narratives that normalize and privilege patriotism, militarism, consumerism, White supremacy, heterosexism, rugged individualism, technology, and a positivistic conception of the world. Finally, the book highlights several textbooks that challenge readers to rethink their stereotypical views of the Other, to reflect upon the constitutive forces causing oppression in schools and in the wider society, and to reflect upon how to challenge corporate and political dominance over knowledge production.

world history the modern world textbook: War, Nation, Memory Keith A. Crawford, Stuart J. Foster, 2007-12-01 The Second World War stands as the most devastating and destructive global conflict in human history. More than 60 nations representing 1.7 billion people or three quarters of the world's population were consumed by its horror. Not surprisingly, therefore, World War II stands as a landmark episode in history education throughout the world and its prominent place in school history textbooks is almost guaranteed. As this book demonstrates, however, the stories that nations choose to tell their young about World War II do not represent a universally accepted "truth" about events during the war. Rather, wartime narratives contained in school textbooks typically are selected to instil in the young a sense of national pride, common identity, and shared collective memory. To understand this process War, Nation, Memory describes and evaluates school history textbooks from many nations deeply affected by World War II including China, France, Germany, Japan, USA, and the United Kingdom. It critically examines the very different and complex perspectives offered in many nations and analyses the ways in which textbooks commonly serve as instruments of socialisation and, in some cases, propaganda. Above all, War, Nation, Memory demonstrates that far from containing "neutral" knowledge, history textbooks prove fascinating cultural artefacts consciously shaped and legitimated by powerful ideological, cultural, and sociopolitical forces dominant in the present.
