the road to excellence ericsson: Identity, Pedagogy and Technology-enhanced Learning Selena Chan, 2020-02-24 This book gathers work from over a decade of study, and seeks to better understand and support how learners become tradespeople. The research programme applies recent concepts from neuroscience, educational psychology and technology-enhanced learning to explain and help overcome the challenges of learning in trades-learning contexts. Due to the complex and multifarious nature of the work characterising trade occupations, learning how to become a tradesperson requires a significant commitment in terms of time, along with physical and cognitive effort. All modalities (visual, aural, haptic etc.) and literacies (text, numerical, spatial etc.) are required when undertaking trade work. Manual dexterity and strength, coupled with the technical and tacit knowledge required for complex problem solving, not to mention suitable dispositional approaches, must all be learnt and focused on becoming a tradesperson. However, there is a substantial gap in the literature on 'how people learn a trade' and 'how to teach a trade'. In this book, contemporary teaching and learning approaches and strategies, as derived through practice-based participatory research, are used to highlight and discuss pragmatic solutions to facilitate the learning and teaching of trade skills, knowledge and dispositions. The approaches and strategies discussed include the implementation of technology-enhanced learning; project-based inquiry/problem-based learning; and recommendations to ensure learners are prepared for the future of work.

the road to excellence ericsson: Making Teachers Better, Not Bitter Tony Frontier, Paul Mielke, 2016-08-23 In too many districts, evaluation of teachers ensures competence but does little or nothing to encourage and support expertise. In this thought-provoking and groundbreaking book, Tony Frontier and Paul Mielke address this issue head-on, combining the conceptual and the practical by offering a compelling vision of teacher growth, along with nearly three dozen step-by-step protocols for working with teachers. They present a powerful rationale for reconceptualizing teacher evaluation by creating a balanced system of three equally important components: Reliable and valid evaluation. Empowering and focused supervision. Meaningful and purposeful reflection. Each component is discussed in terms of its purpose, premise, processes, practices, and payoffs. Revealing examples based on the authors' experiences in classrooms across the country show what evaluation, supervision, and reflection look like when they're not done well--and what they could look like if done more effectively. Providing insight and inspiration, *Making Teachers Better, Not Bitter* paves a clear path to better teaching and helps you acknowledge and support the hard work that teachers do every day to make learning come alive for their students.
