ncic operating manual 2022: Improving Responses to Immunotherapy in Glioblastoma Multiforme Stephanie E. B. McArdle, Michael Barish, 2024-04-29 Glioblastoma multiforme (GBM) is a uniformly fatal primary brain tumour. Whilst many therapeutic interventions have been studied pre-clinically very few new therapies have been approved for the use of GBM therapy. These tumours present a unique challenge due to their location within the brain, making delivery of therapeutic interventions challenging. Active immunotherapy represents an attractive avenue for therapy, with activated immune cells being shown to cross the blood brain barrier and penetrate brain tumours. Despite several advances being made in numerous other cancer types, many immunotherapeutic interventions in GBM have failed to make it past phase 3 clinical trials and as of now (2022) no immunotherapeutic interventions have been approved for the therapy of GBM.

ncic operating manual 2022: Dose Finding and Beyond in Biopharmaceutical Development Jingjing Ye, Ding-Geng Chen, Wen Zhou, Qiqi Deng, Joseph C. Cappelleri, 2024-10-28 This book covers topics in 2 parts: 1) Review of FDA Guidance, 2) Novel Designs and Analyses. While covering basic principles of dose finding, this book details advancements made in drug development. Finding the right dose(s) is one of the most important objectives in new drug development. In Phase I clinical development, one of the objectives is to escalate test doses from low to high. The low doses should be safe, then escalate up to the maximally tolerable dose (MTD). Phase II clinical trials then lower test doses to the minimal efficacious dose (MinED). Dose range of a study drug can be thought of as the doses between MinED and MTD. From this dose range, one or a few doses are selected for Phase III confirmation. In practice, dose finding is a very difficult in every phase of clinical development for new drugs. The editors brought distinguished researchers and practitioners in biopharmaceuticals and universities, to discuss the statistical procedures, useful methods, and their novel applications in dose finding. The chapters in the book present emerging topics in dose-finding and related interdisciplinary areas. This timely book is a valuable resource to stimulate the development of this growing and exciting field in drug development.
