critical thinking assessment test free: Sustainable. Resilient. Free. John Warner, 2020-12-08 After the coronavirus pandemic has laid bare the unsustainability of our public higher education system, an author and educator maps out a path for change. In 1983, U.S. News and World Report started to rank colleges and universities, throwing them into competition with each other for students and precious resources. Over the course of the next thirty or so years, a Reagan-era ethos of privatization and competition transformed students into consumers and colleges into businesses. Now, tuition is unaffordable. Student loan debt is more than \$1.6 trillion, and most college faculty work in adjunct positions for low pay and with no job security. Colleges seem to exist only to enroll students, collect tuition, and hold classes. When learning happens, it is in spite of the system, not because of it. In Sustainable. Resilient. Free., John Warner envisions a future in which our public colleges and universities are reoriented around enhancing the intellectual, social, and economic potentials of students while providing broad-based benefits to the community at large. As Warner explains, it's not even all that complicated. It's no more costly than the current system. We just have to choose to live the values we claim to hold dear. A critical read for anyone invested in the future of public higher education.

critical thinking assessment test free: The Socratic Classroom Sarah Davey Chesters, 2012-09-13 This book provides a framework for a collaborative inquiry-based approach to teaching and learning suitable not only for formal educational settings such as the school classroom but for all educational settings. For teachers, educationalists, philosophers and philosophers of education, The Socratic Classroom presents a theoretical as well as practical exploration of how philosophy may be adopted in education. The Socratic Classroom captures a variety of philosophical approaches to classroom practice that could be broadly described as Socratic in form. There is an exploration of three distinct approaches that make significant contributions to classroom practice: Matthew Lipman's Community of Inquiry, Leonard Nelson's Socratic Dialogue, and David Bohm's Dialogue. All three models influence what is termed in this book as 'Socratic pedagogy'. Socratic pedagogy is multi-dimensional and is underpinned by 'generative, evaluative, and connective thinking'. These

terms describe the dispositions inherent in thinking through philosophical inquiry. This book highlights how philosophy as inquiry can contribute to educational theory and practice, while also demonstrating how it can be an effective way to approach teaching and learning. Audience This publication is suited to educators, teacher educators, philosophers of education and philosophers in general. It has a theoretical and practical focus, making it truly interdisciplinary.

It explores how new demands for accountability and new technologies are changing the way student learning is assessed. The author, one of the most respected assessment researchers in the nation, provides a framework for assessing student learning and discusses historical and contemporary debates in the field.
