agriculture praxis study guide: Tourism and Agriculture Rebecca Maria Torres, Janet Henshall Momsen, 2011-03-07 Shifting global consumption patterns, tastes and attitudes towards food, leisure, travel and place have opened new opportunities for rural producers in the form of agritourism, ecotourism, wine, food and rural tourism and specialized niche market agricultural production for tourism. Agriculture is one of the oldest and most basic parts of the global economy, while tourism is one of the newest and most rapidly spreading. In the face of current problems of climate change, rising food prices, poverty and a global financial crisis, linkages between agriculture and tourism may provide the basis for new solutions in many countries. A number of challenges, nevertheless, confront the realization of synergies between tourism and agriculture. Tourism and Agriculture examines regional specific cases at the interface between tourism and agriculture, looking at the impacts of rural restructuring, and new geographies of consumption and production. To meet the need for a more comprehensive appreciation of the relationships and interactions between the tourism and agricultural economic sectors, this book consider the factors that influence the nature of these relationships; and explore avenues for facilitating synergistic relationships between tourism and agriculture. These relationships are examined in thirteen chapters through case studies from eastern and western Europe, Japan and the United States and from the developing countries of the Pacific, the Caribbean and Ghana and Mexico. Themes of diversification, economic development, and emerging new forms of production and consumption, are integrated throughout the entire book. This essential volume, built on original research, generates new insights into the

relationships between tourism and agriculture and future economic rural development. Edited by leading researchers and academics in the field, this book will be of value to students, researchers and academics interested in tourism, agriculture and rural development.

agriculture praxis study guide: Integrating Agriculture, Green Marketing Strategies, and Artificial Intelligence Garwi, Jabulani, Dzingirai, Mufaro, Masengu, Reason, 2024-12-26 As consumers prioritize sustainability, agricultural producers are seeking new ways to meet this demand through green marketing, which emphasizes the ecological benefits of their products. AI technologies play a crucial role in this integration by optimizing farming operations, from precision agriculture that minimizes resource use to data-driven insights that inform marketing strategies. By utilizing AI, farmers can improve crop yields and reduce environmental impact while communicating their sustainability efforts to consumers. This approach supports environmental sustainability and creates a more resilient agricultural sector that aligns with the values of modern consumers. Integrating Agriculture, Green Marketing Strategies, and Artificial Intelligence explores the intersection of agriculture, green marketing strategies, and AI within the context of sustainability. It examines the integration of these diverse domains, providing transformative insights into addressing pressing environmental and social challenges. This book covers topics such as precision agriculture, sustainable development, branding, and marketing, and is a useful resource for data scientists, environmental scientists, business owners, marketers, agriculturalists, academicians, and researchers.

agriculture praxis study guide: Perspectives of the Silent Majority Amitava Mukherjee, 2017-07-12 This title was first published in 2001. This text is an exercise in learning from the voices of the communities living in Indian villages near urban areas. It is concerned, primarily, with learning what these communities have to say on their well-being and livelihoods and is, therefore, an attempt to record and register as much as possible of what these communities say. Agriculture in urban areas of Haryana and Uttar Pradesh plays an important role for livelihoods and in supplying foodstuffs to communities and markets. It constitutes a major source of income both for landowners and labourers. The study then looks at the relationship between agriculture and urban areas, and the phenomenon of industrialization/urbanization. In presenting these perspectives, the farmers gave insights into some related issues such as the role of agriculture in their livelihoods, the nature of agricultural constraints and the the impact of air pollution on quality of life.

agriculture praxis study guide: Urban Agriculture for Growing City Regions Undine Giseke, Maria Gerster-Bentaya, Frank Helten, Matthias Kraume, Dieter Scherer, Guido Spars, Fouad Amraoui, Abdelaziz Adidi, Said Berdouz, Mohamed Chlaida, Majid Mansour, Mohamed Mdafai, 2015-09-07 This book demonstrates how agriculture can play a determining role in integrated, climate-optimised urban development. Agriculture within urban growth centres today is more than an economic or social left-over or a niche practice. It is instead a complex system that offers multiple potentials for interaction with the urban system. Urban open space and agriculture can be linked to a productive green infrastructure - this forms new urban-rural linkages in the urbanizing region and helps shape the city. But in order to do this, agriculture has to be seen as an integral part of the urban fabric and it has to be put on the local agenda. Urban Agriculture for Growing City Regions takes the example of Casablanca, one of the fastest growing cities in North Africa, to investigate this

approach. The creation of synergies between the urban and rural in an emerging megacity is demonstrated through pilot projects, design solutions, and multifunctional modules. These synergies assure greater resource efficiency; particularly regarding the use and reuse of water, and they strengthen regional food security and the social integration of multiple spheres. A transdisciplinary research approach brings together different scientific disciplines and local actors into a process of integrated knowledge production. The book will have a long lasting legacy and is essential reading for researchers, planners, practitioners and policy makers who are working on urban development and urban agricultural strategies.
