Zhongheng Zhang, 2023-04-25 Volume I.B An outbreak of a respiratory disease first reported in
Wuhan, China in December 2019 and the causative agent was discovered in January 2020 to be a
novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory
syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly
disseminated worldwide, with clinical manifestations ranging from mild respiratory symptoms to
severe pneumonia and a fatality rate estimated around 2%. Person to person transmission is
occurring both in the community and healthcare settings. The World Health Organization (WHO) has
recently declared the COVID-19 epidemic a public health emergency of international concern. The
ongoing outbreak presents many clinical and public health management challenges due to limited
understanding of viral pathogenesis, risk factors for infection, natural history of disease including
clinical presentation and outcomes, prognostic factors for severe illness, period of infectivity, modes
and extent of virus inter-human transmission, as well as effective preventive measures and public
health response and containment interventions. There are no antiviral treatment nor vaccine
available but fast track research and development efforts including clinical therapeutic trials are
ongoing across the world. Managing this serious epidemic requires the appropriate deployment of
limited human resources across all cadres of health care and public health staff, including clinical,
laboratory, managerial and epidemiological data analysis and risk assessment experts. It presents
challenges around public communication and messaging around risk, with the potential for
misinformation and disinformation. Therefore, integrated operational research and intervention,
learning from experiences across different fields and settings should contribute towards better
understanding and managing COVID-19. This Research Topic aims to highlight interdisciplinary
research approaches deployed during the COVID-19 epidemic, addressing knowledge gaps and
generating evidence for its improved management and control. It will incorporate critical,
theoretically informed and empirically grounded original research contributions using diverse
approaches, experimental, observational and intervention studies, conceptual framing, expert
opinions and reviews from across the world. The Research Topic proposes a multi-dimensional
approach to improving the management of COVID-19 with scientific contributions from all areas of
virology, immunology, clinical microbiology, epidemiology, therapeutics, communications as well as
infection prevention and public health risk assessment and management studies.
